

Into the Woods

Living things are things that are alive.

They can reproduce, grow, change on their own and respond to movement.

Some non-living things did use to be alive or part of something that was alive.

There are also lots of things that will never be alive.

Plants do certain things to stay alive. They are called life processes. Living things can move, grow, eat, breathe, and reproduce.

What Plants Need to Grow

BOOKS TO READ WITH THIS TOPIC

Plants found in different places

Cacti are found in the desert.

Sea grass lives underwater

Venus fly traps live in the rainforest.
